

# Total Hoof Care: in one bottle!

**1. Shines.** Provides a bright cosmetic shine that looks great! The sealant reflects the visible light that strikes the hooves and makes them look brilliant.

**2. Moisturizes.** Collagen protein emulsions seal-in the internal moisture from the blood supply. This provides the natural moisture balance for hoof flexibility.

**3. Fights thrush.** The product contains ingredients that target bacteria and fungi without harming sensitive hoof tissue.

**4. Improves flexibility.** Collagen protein emulsions build up protection with each application and do not have to be applied daily. Products that have to be applied daily only offer intermittent protection.

**5. Enhances frog function.** Sealing in the internal moisture from the blood supply helps the hard, dry frog come alive and soften so that it can function as a natural cushion to reduce shock. The sealant also improves the frog's function as a blood pump for circulation back up the leg.

**6. Smooths ridges.** Collagen protein emulsions build up protection with each application. Over time, these layers of protection seem to smooth out the ridges along the wall surface where they occur.

**7. Repels contaminants (urine soaked manure, external moisture).** The collagen protein emulsions harden (cure) in minutes after each application. They perform as a release agent to repel moisture and contaminants.

**8. Provides an antiseptic barrier against infection.** Active ingredients in the formula bond to hoof protein for long lasting protection against infection.

**9. Strengthens horn.** By helping to maintain the natural moisture balance in the hoof, the horn will not be as brittle and is less susceptible to damage.

**10. Helps prevent toe cracks.** The collagen protein emulsions build up protection and last longer. This helps prevent toe cracks caused by the wet/dry cycling (caused by the frequent cycling of the feet between wet pastures and dry stalls).
