

# TUCKER GEN II TRAIL SADDLES

*The Next Generation of*

## ULTIMATE TRAIL COMFORT

For 30 years, Tucker Saddlery has been dedicated to the design and manufacturing of trail saddles that provide **Ultimate Trail Comfort** for both the rider and horse. We have extensively researched saddle fit, especially as it applies to the **gaited** breeds. From the beginning, we have built our saddles to accommodate both standard and **gaited** horses. Now Tucker introduces the **Next Generation of Ultimate Trail Comfort** with the **GEN II™** saddle line. In addition to new features that enhance rider comfort, the **GII™ Tree** and **GEN II™ Skirt** design raise saddle fit and equine comfort to a new level. Self-adjusting bars conform to the horse's unique shape, freeing your horse to promote, encourage, and enhance its natural gait. Ideal for the **gaited** horse, and a feature **ALL** horses will appreciate.

### GEN II™ Seat System

• The Tucker GEN II™ seat system features the fusion of patented shock absorbing **Gel-Cush™** technology with **MicroCell™** ventilating top grain leather and conforming **V-Foam™** padding to provide ultimate trail comfort.

### Adjustable Position - Close Contact Rigging

• The adjustable position-close contact rigging is an in-skirt rigging that allows you to position the saddle most suitable to horse and rider, while eliminating bulk under the rider's leg and providing close contact with the horse.

### GEN II™ Skirt Design

• Equal comfort for rider and horse. The same patented **Gel-Cush™** padding riders have come to know and love from Tucker Saddles is now available in a gel bar pad system for the comfort of the horse. The **Gel-Cush™** bar pad is inserted between the bar and saddle skirt to absorb shock and increase comfort and fit for the horse.

### Wool Skirt Lining *all new*

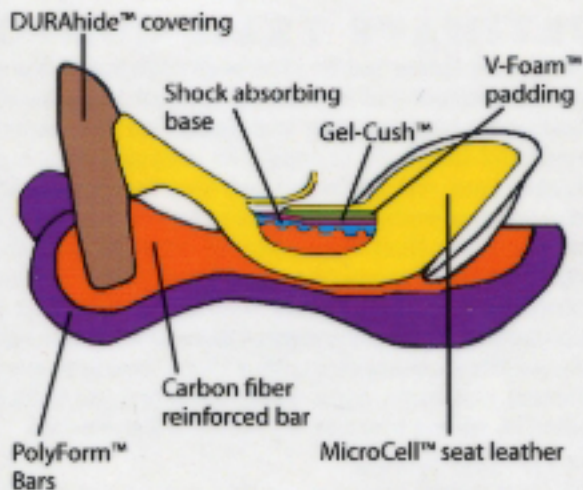

All Tucker GEN II™ saddles use 100% Virgin Wool that has gone through a chemical carbonization process to eliminate impurities.

Maintenance recommendations:

- Brush off soiling
- Use Woolite®

### GII™ Tree

- The Tucker GII™ tree incorporates a flexible bar system consisting of carbon fiber reinforced wood and PolyForm™ laminate. The GII™ bars self adjust and disperse weight, freeing your horse to promote, encourage, and enhance its natural gait, without sacrificing strength and durability.
- The GII™ tree is finish coated in **DURAhide™** covering. More consistent than traditional rawhide and fiberglass covered trees, it adds strength while keeping out moisture and the elements, adding to the life of your saddle.
