Air exit valve

Fully integrated flexible mask

Flexi Neb[®] E2

Flexineb is the fast, portable equine nebuliser, utilising Nortev proprietary technology to efficiently deliver aerosolised medication directly to the lungs.

What is nebulisation?

- Nebulisation is a technique where medication or natural therapy liquids are aerosolised into tiny particles small enough for your horse to inhale
- Commonly known as aerosol therapy
- The size of these particles is vital for optimum absorption to the lungs

Portable & silent

- Easy to use: no cables, hoses or long wires
- Fully re-chargeable lithium ion battery (up to 4 hours operating time)
- Completely silent: ensuring your horse is relaxed throughout the process

Compact & easy to use

- Fully integrated system, the aerosol holding chamber links directly to the integrated medication holding cup, ensuring no medication is lost in long hoses
- Battery power warning light giving you notice if your battery is low
- Automatic switch-off after 18 minutes

Applications

- Flexineb is suitable for use with bronchodilators, antibiotics, corticosteroids, natural therapies & mucolytics
- Recommended for: COPD, RAO, heaves, allergies, EIPH and pneumonia
- See www.haygain.com for more info

The medication holding cup incorporates a wafer thin metallic membrane with micro holes. Vibration of this membrane acts like a pump, converting the liquid drug into a fine aerosol of particles small enough to penetrate the lower airways

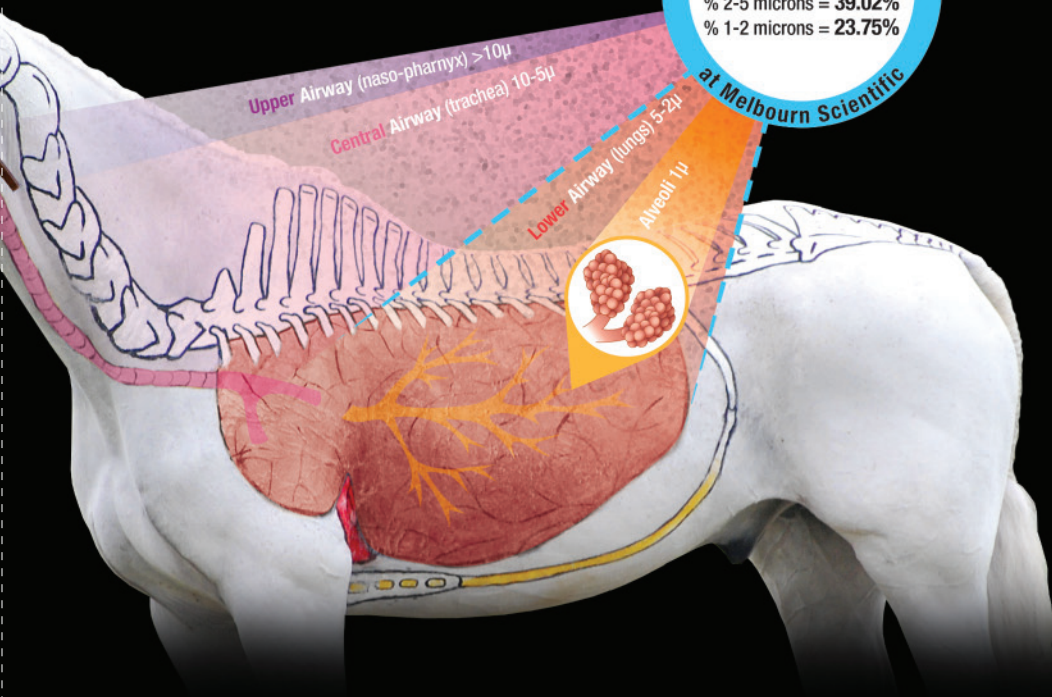

Image © Gillian Higgins, Horses Inside Out

71% of the nebulised drug will reach the LOWER respiratory tract, with the remainder reaching the UPPER respiratory tract & trachea*

Unique & adaptable

- 3 different medication cups available, for optimum delivery of chosen medication
- Available in 3 sizes: foal/pony, horse and large horse
- Flexineb's automatic tuning functionality allows Flexineb to adapt immediately to the different liquid medications used, ensuring optimum functionality and delivering the best possible aerosol to your horse's airway and lungs

Comfortable & lightweight

- Flexineb is the only available flexible and pliable rubber mask, ensuring comfort for your horse, a good fit and tight seal around the nose
- Very quick and easy 2-step process to put on and fit to your horse
- Weighs just 1kg / 2.2 lbs
- Flexineb system includes everything you need to get started
- Supplied in a durable reuseable grooming box to keep your unit safe
- Flexineb mask and unit carries a 24-month warranty **
- The medication cup on average delivers 120 treatments

From the horse's mouth...

“ We use Flexineb on a regular basis and find it a very effective piece of equipment for horses with respiratory problems. ”

Maureen Haggas, Racehorse trainer

“ The most important aspect about Flexineb is the fact it is self-contained, very easy to use and tolerated brilliantly by horses so you're unlikely to get treatment failure with such a simple and effective product. ”

**Richard Hepburn, Veterinarian,
BVSc DipACVIM MS CertEM(IntMed) MRCVS ACVIM**

“ Nortev has finally developed the ultimate Nebulizer with the Flexineb. To me a product has to satisfy three requirements. They must be affordable, user friendly and most of all work. Flexineb does it all. I have used it on race horses, mares, yearlings and recently a foal with the new foal mask. ”

It is simple to use and the horses relax and seem to enjoy treatment since there is no noise, excessive mist or cumbersome hoses and cords.
