

Copasure® goat 2g

Animax

A copper supplement for ruminating kid goats* over 25 lbs bodyweight

*Starter, grower, finisher, breeder and lactating

Ingredients:

Copper Oxide Particles

Guaranteed Analysis:

Copper, minimum: 830,000 ppm.

Copper, Maximum: 910,000 ppm.

Supplementation Directions:

Seek the advice of a veterinarian or goat husbandry specialist to establish copper status and the type of supplementation required.

Ruminating kid goats over 25 lbs bodyweight/ over 5 weeks: 1 capsule.

Insert the capsule orally with a suitable applicator. Regurgitation is possible with any capsule if not given properly. To be effective, capsules must be swallowed. Use only intact capsules. Do not crush or break.

Precautions:

- For Use in kid goats only.
- Store in a cool (below 85°F) dry place.
- Protect from sunlight.

Warnings:

Keep out of reach and sight of children.

Caution:

- Do not give to non-ruminating kid goats, kid goats of unknown copper status or those supplemented with other sources of copper.
- Do not use in kid goats suffering from jaundice or any other liver disorder.
- No other copper supplementation should be given immediately prior to or 6 months after administration of the capsule.
- Excessive levels of molybdenum, sulfur, selenium and iron in feed or water may impair dietary copper absorption.
