Universal Total Tagger Applicator
APP-UTT

Allflex®

General Description
The Universal Total Tagger Applicator is fully adaptable to apply the entire range of Allflex tags. With the replaceable clip in the jaws and the replaceable applicator pin, the applicator can be configured to apply visual and EID Tags. This applicator works well with all livestock tag applications with the deep jaws and the user-friendly comfort grip.

Construction
This rugged universal applicator is constructed of High Quality Die Cast Aluminum with removable/replaceable colored plastic inserts for application of Allflex Tags.

Performance Capabilities
For application of Allflex EID tags, the white clip or the black clip needs to be removed. This allows the EID tag to fit properly in the jaws of the applicator. In addition, the Red blunt pin must be installed.

For application of Allflex Global and Tamperproof tags, the Black Clip needs to be installed with the red blunt pin. Included with Universal Total Tagger.

For application of Allflex Classic tags and some Insecticide tags, the White clip is used along with either the sharp or blunt pin depending on male tag design. Must be ordered separately.
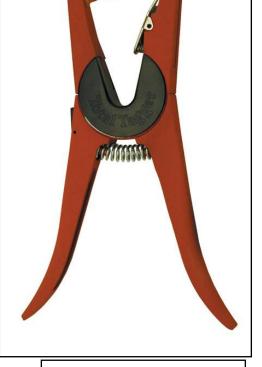

Please follow manufacturer's directions for proper configuration.
