

“I saved two chilled calves the first night that I owned this calf warmer!

This Roy-L-Heat warmer is a great tool for saving chilled calves. I mounted mine on a sled, along with a generator. I pull the unit with my 4-wheeler to the cow. The cow stays close-by and claims her calf. Whereas, if you take the calf to the barn or house, she may resist claiming the calf later.

This Roy-L-Heat box will warm the calf and dry it off, including the under side, faster than any method you have used. Fifteen minutes in this warmer will make a weak, newborn calf stand and look for dinner!

I am so glad that you suggested this warmer to me!”
