

# Revalor® Implant Strategies

(Trenbolone acetate/estradiol)

Supported by Intervet Implant Trial Data

Steers		
Days on Feed	Initial Implant	Terminal Implant
Less than 130 days	Revalor-S	None
130 days to 170 days	Revalor-IS	Revalor-IS
Greater than 170 days	Revalor-IS	Revalor-S

Heifers		
Days on Feed	Initial Implant	Terminal Implant <sup>1,2</sup>
Less than 130 days	Revalor-H	None
130 days to 170 days	Revalor-IH	Revalor-H
Greater than 170 days	Revalor-IH	Revalor-H

<sup>1</sup>Revalor-200 can be used for slightly increased performance, more quality-grade risk.  
<sup>2</sup>Revalor-H can be used when terminal implant period is <100 days and MGA\* is being fed.

Product	TBA	Estradiol
Revalor-IS	80 mg	16 mg
Revalor-IH	80 mg	8 mg
Revalor-S	120 mg	24 mg
Revalor-H	140 mg	14 mg
Revalor-200 <sup>*</sup>	200 mg	20 mg
Finaplix®-H	200 mg	---

<sup>\*</sup>200 mg TBA implants have demonstrated quality-grade risk in steers without corresponding performance improvement vs. Revalor-S. Used in heifers, there is a possibility of some performance advantage with a risk of a decrease in quality grade. Revalor-H offers best overall feedlot and carcass performance.
