

# **Best Friend™ Cribbing Muzzle**

## ***Intrepid International***

### **For Equine Behavior Management**

The Best Friend Cribbing Muzzle allows horses to eat and drink while gently and humanely limiting the damage from a number of undesirable equine behaviors, including:

- Cribbing and/or wood-chewing
- Chewing blankets, bandages or wounds
- Chewing other objects
- Biting other horses
- Biting themselves
- Biting people.

The nylon and aluminum construction is lightweight, rustproof, rot-proof and easy-to-clean. The Best Friend Cribbing Muzzle is padded for comfort and attaches to your breakaway halter with a four-point breakaway system that enhances safety. Your muzzle is packaged in a free grooming bag.

### **Important Information:**

We have made every effort to make this product as durable as possible without compromising the quality or benefits. Since many horses wear cribbing muzzles 24/7, comfort was the primary concern in the design. Steel muzzles tend to be quite heavy and can cause excessive rubbing. To minimize the potential for rubbing, lightweight aluminum was utilized in the construction of the Best Friend Cribbing Muzzle. Aluminum, however, can wear through. Therefore we recommend that you periodically check the bottom for wear and replace the muzzle when the aluminum bars show excess wear. Excessive wear of the bars could potentially be dangerous.
