

Copasure® Goat 4g

Animax

A copper supplement for adult goats from 50 lbs to 300 lbs bodyweight
12 capsules

INGREDIENTS: Each capsule contains 4 g copper oxide particles (80% w/w of particles are 0.5 ± 0.1 mm in diameter and 1 mm to 8 mm in length).

SUPPLEMENTATION DIRECTIONS:

Seek the advice of a veterinarian or goat husbandry specialist to ascertain copper status and the type of supplementation required for the goats under consideration. It is not possible to cover the full range of deficiency states with a simple dosing regimen. Veterinarians should adapt their advice on supplementation to suit local conditions.

Adult goats 50 to 200 lbs bodyweight / over 5 weeks: 1 capsule. Adult goats 200 to 300 lbs bodyweight: 2 capsules.

Insert the capsule orally with a suitable applicator. Regurgitation is possible with any capsule if not given properly. To be effective, capsules must be swallowed. Use only intact capsules. Do not crush or break.

PRECAUTIONS:

- For use in adult goats only.
- Store in a cool (below 85°F) dry place.
- Protect from sunlight.

WARNINGS: Keep out of reach and sight of children.

CAUTION:

- Do not give to adult goats of unknown copper status or those supplemented with other sources of copper.
- Veterinary advice should be sought before supplementing breeds known to be copper sensitive.
- Do not use in adult goats suffering from jaundice or any other liver disorder.
- No other copper supplementation should be given immediately prior to or 6 months after administration of the capsule.
- Excessive levels of molybdenum, sulfur, selenium, or iron in feed or water may impair dietary copper absorption.

HOW SUPPLIED:

12 x 4g capsules per tube. Also available in a 2g capsule for ruminating kid goats over 25 lbs bodyweight.
