- Lanolin • Glycerin • Coconut Oil • Safflower Oil • Almond Oil
- Avocado Oil • Wheat Germ Oil • Lecithin • Vitamin E • Aloe Vera Oil

Also Use On:

Saddle Sores Rope Burns Scars Scabs/Abrasions

Caution: Although Hoof-Alive is non-irritating, because of its penetrating nature, do not apply over or with fly sprays, medications or possible irritants. If in doubt, or for sensitive skin, do a patch test. Discontinue use if irritation occurs.

Hoof-Alive™ A Natural approach to hoof care.

A non-irritating, natural hoof dressing and a general purpose salve.

Hooves—Use to treat dry, cracked, brittle, contracted and sore feet. Hoof-Alive is compatible with the interior of the hoof and will permeate the hoof wall in about 7 days. It will not wash off in excessive wet conditions, not evaporate in hot, dry conditions. Hoof-Alive establishes and stabilizes MOISTURE BALANCE, MORE EXPANSION, BETTER CIRCULATION AND HOOF GROWTH. (1) Apply every other day the first week. (2) Apply once a week thereafter or as needed.

Cracks—Daily Hoof-Alive into cracks and apply. Hoof-Alive to coronet (at hairline) until Hoof-Alive penetrates the hoof wall and displaces the cracks, swelling the cracks shut. Apply twice per week until cracks grow out.

Coronet Soaking Severe Cracks—Following proper shoeing (1) Apply Hoof-Alive generously to the Hoof-Alive coronet soaker (available from any Hoof-Alive Dealer) BE SURE TO KEEP SOAKERS AWAY FROM SHAVINGS by using a vet-wrap or comparable; (2) Adjust soaker to fit the coronet and strap into place; (3) Soak coronet around the clock for 2 weeks, reapplying approx. 1/2 oz. Of Hoof-Alive to the fleece every 48 hours. Hoof-Alive should completely saturate the growth tissues and also swell the crack closed from the inside-out in approx. 7 days; (4) Continue to apply Hoof-Alive without soaker onto crack and coronet area twice per week until crack is grown out.

Contracted Heels—Following proper shoeing or trimming: (1) Soak hoof once, overnight in warmed-up Hoof-Alive using a soaking boot, (2) After removing the boot, follow with 15 min. of daily exercises on SOFT GROUND, (3) Repeat the Hot Soak every 3 weeks while continuing to exercise, until frog begins to develop and hooves expand. Do not use Coronet Soakers with anything but Hoof-Alive. Do not leave soaking boots on more than 12 hours.

Best to store Hoof-Alive at room temperature. Product begins to liquify at around 95° F and starts to harden at 40° F and below.

Ingredients: Lanolin, Glycerin, Coconut Oil, Safflower Oil, Almond Oil, Avocado Oil, Wheat Germ Oil, Lecithin, Vitamin E, Aloe Vera Oil, Anti-sequester Surfactants, Wetting Agents, Fragrance.
