

Installation Instructions

1. Locate mounting position on gusset to create a straight pull on the existing coupler handle.
2. Mark and drill two 9/32" diameter or 5/16" diameter holes in the gusset.
3. Bolt on the EZE-Latch handle using the 1/4" carriage bolts, washers, and nuts which are provided.
4. When you set up your cable length as in (5) below, your trailer coupler handle should be down and latched as for travel. The EZE-Latch handle should be pointing upward as in the photo. Run the cable through the coupler handle and adjust to provide the correct length of travel.
5. Crimp cable ferrules using electrical crimp pliers. Trim excess cable.
6. To operate, simply pull the handle down to release the coupler pin. Then use a long-handled hammer to slide the gooseneck lock out of the way.

Safety Feature: Please note that the RED CAP on the handle acts as a SAFETY FLAG to tell you that your trailer is safely hooked up. When the handle is **UP**, your trailer is *good to go*. When the handle is **DOWN**, you are *unhooked*. (As viewed from your rearview mirror)
