White Lightning® Liquid

Instructions for use:

Liquid White Lightning® is activated by mixing White Lightning® with equal parts of white vinegar. This step should be performed in paper or plastic cups, but **not** in metal as White Lightning® is an oxidizer. White Lightning® is aggressive for 8 hours once mixed with vinegar. After 8 hours it becomes inert. **Never** mix more than you are going to use at one time.

Hoof Soak

A foot treatment consists of 1-2oz White Lightning®, 1-2oz white vinegar and enough water to cover half way up the hoofwall. Remove shoes, if possible, and clean the hoof of dirt and debris. Place a clean piece of washcloth or terry cloth towel in the bottom of the soak bag, then add the activated White Lightning®. Insert the clean hoof in a heavy plastic bag or the Disposable Vapor/ Soak Boot containing the activated White Lightning® solution and add enough water to come halfway up the hoofwall. Secure the top around the leg to prevent the escape of the gas produced by the activated White Lightning® (vet wrap around the top of the soak boot works well). Stand your horse in the bag/ boot for at least 30-45 minutes. **CAUTION: Do not mix any other product with White Lightning® as this could cause an undesirable chemical reaction. White Lightning® liquid may discolor hair or clothing.**

Repeat 2-3 times per week for the first 4-6 weeks. Then 1-2 times per week until the hoof has completely grown out. Treat once a month after the hoof has grown out to help keep White Line Disease away.
