

White Lightning®

Grand Circuit

Eliminates hoof rot, thrush, and white line disease on contact. Does not dry or attack healthy tissue.

Directions: Activate 2 oz of **White Lightning®** by mixing with 2 oz of white vinegar in a non-metal container. This results in generated Chlorine Dioxide (ClO₂) gas. Place liquid and hoof into heavy plastic bag or **White Lightning®** Soak Bag securing the top to contain generated gas. Soak for 30-40 minutes three times per week for optimal effect until hoof wall has completely grown out. Best if horse is not wearing a shoe.

White Lightning® is the first truly revolutionary treatment for hoof rot, thrush and white line disease (commonly known as “seedy toe”) in horses, donkeys, pigs and cattle. It stabilizes the PH balance and removes the biofilms protecting the microorganisms, neutralizing them within minutes of contact, in vitro.

White Lightning® creates an environment hostile to bacteria and fungal growths without harming healthy tissue.

Active Ingredients:

Oxychlorine Compounds 2%

Inactive Ingredients:

Aqueous Base 98%

Total 100%

Cautionary Information:

Use only as directed. Not responsible for improper use. Keep out of reach of children.

Will discolor hair and clothing. Avoid contact with eyes. If swallowed, call physician.

Dispose of container properly. Do not expose to sunlight. Protect from freezing. Use and store in original container only.
