

Copasure Cattle Bolus

Amimax

- 20 boluses
- Lasts up to 6 months
- 30g copper oxide

Mineral supplement. Prolonged release of copper for all cattle classes.

20x35g

Supplementation Directions

Seek the advice of a veterinarian or cattle husbandry specialist to establish copper status and the type of supplementation required. For all beef and dairy cattle except calves that are pre-ruminants-ensure that the requirements for human development have been met before giving to young ruminants.

- **Cattle 440-1100lbs: 1 bolus**
- **Cattle over 1101lbs: 2 boluses**

Copasure Cattle boluses should be delivered orally using a suitable applicator. Always use a crush or handling system (and a head scoop if you have one). Care should always be taken during supplementation to avoid injury to the mouth and pharynx. For more information and full product range visit www.animax-vet.com.

Precautions

- For use in **ruminating** cattle only. **DO NOT** give to **pre-ruminant calves**.
- The copper status of the herd should be known prior to use.
- **DO NOT** exceed the stated supplementation level without consulting a veterinarian or cattle husbandry/ nutritional specialist.
- The bolus should only be given at intervals exceeding 6 months.
- No other form of copper supplement should be given immediately prior to, or for 6 months after, supplementation with cattle boluses.
- Keep out of reach and sight of children.

Ingredients

Copper oxide (as copper oxide needles), calcium propionate, gum Arabic.

Guaranteed analysis

Copper, minimum 64%.

How Supplied

20x1.23oz (35 g) boluses in a blister in a cardboard box.
