

CF-Plus Advanced Large Breed ICSB®

In many cases, CF-Plus Advanced has shown support for reproductive capacity in male dogs with reduced fertility. It may also aid in stabilizing cyclicity in female dogs.

The CF-Plus Advanced has added ingredients specifically formulated to help facilitate the proximal, or distal, droplets of immature sperm cells, an abnormal morphology of sperm.

Net Contents:

378 g (13.33 oz.)

270 tablets

Product Facts:

Active Ingredients Per Tablet (1.4g):

Perna Canaliculus (GlycOmega™ brand Green-Lipped Mussel) ... 600 mg
L-Leucine 0.02 mg

Inactive Ingredients: alfalfa, brewers yeast, microcrystalline cellulose, silicon dioxide, spirulina leaf powder, stearic acid (vegetable).

Cautions:

If animal's condition worsens or does not improve, stop product administration and consult your veterinarian. Safe use in pregnant animals or animals intended for breeding has not been proven. Administer during or after the animal has eaten to reduce incidences of gastrointestinal upset.

Store in a cool, dry place.

GlycOmega™ is a Trademark of Aroma New Zealand LTD.

For use in dogs only.

Directions for Use:

In the male, one tablet for each 30 pounds body weight, daily, for 90 days. Divide the dosage between morning and evening. After 90 days, collect semen specimen and compare to that first initially observed.

In the female, one tablet for each 30 pounds body weight, beginning approximately 60-90 days before onset of estrus. Continue for 60 days. This can support healthy estrous cycles, including the minimization of split heats.

Once the desired result is attained we recommend placing the dog on a maintenance dosage of one tablet for each 60 pounds, daily. If results decrease after placing on a maintenance dose, increase dosage to the original recommended amount.

Warnings:

Not for human consumption. Keep out of reach of children and animals. In case of accidental overdose, contact a health professional immediately.
